WATER CONNECTION

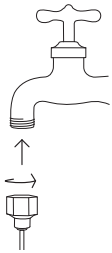

Take care when connecting the water during installation. Correct installation helps prevent leaks or damage.

- Turn off the water supply before connecting the hose.
- Ensure all hoses and fittings are aligned and securely tightened.
- Ensure the hoses are not kinked, twisted or damaged.

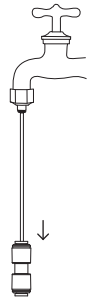

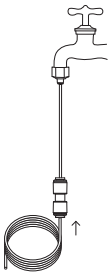

1. Ensure the refrigerator is not plugged into a power supply. Locate the isolation tap for cold water connection (tee and tap fitting not supplied) and the water filter kit.

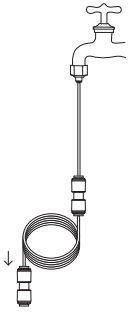

2. Fasten the tap adaptor with short tube to the isolation tap. Tighten by hand and tighten one additional turn with a spanner. Take care not to over tighten.

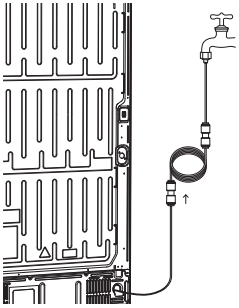

3. Insert the end of tap adaptor short tube into one end of the first hose connector as far as possible.

4. Insert one end of the water hose into the other end of hose connector as far as possible.

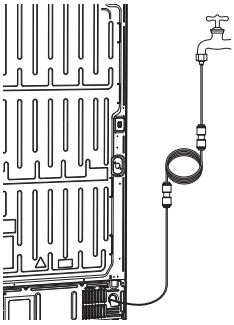

5. Insert the other end of the water hose into one end of the second hose connector as far as possible.

6. Connect the other end of the second hose connector to the hose attached to the back of the product.

Push the hose as far as possible into the connector.

7. Check the connections, turn on the water supply and check for leaks.
